

La Purisima Concepcion Academy

Ushers Enriching Computing Experience with HP Multiseat Computing Solution

HP MultiSeat delivers superb classroom technology within budget.

The La Purisima Concepcion Academy in Malabon City, Philippines has been helping Filipino students achieve their fullest potential through a supportive learning environment.

For them, technology is key to providing their 432 students with better-quality education and a richer learning experience. Given this, they employed the HP Multiseat Computing Solution, HP's low-cost innovation that allows schools and organizations of all sizes to setup a complete digital classroom at the fraction of the cost.

"Students don't just need to read books, they want interactive learning through computers. Students use the internet for their assignments and quizzes and even social networking sites to connect with friends," says Churchelle Moreno, the school's computer instructor. "We have always had a 1:1 ratio of computers to student per class. However, other PCs don't always work so other students have to share workstations."

Maximizing computing resources

With the HP Multiseat Computing Solution, La Purisima Concepcion Academy is able to address the growing needs of their students and maximize technology.

With the help of HP corporate reseller - **Integrated Computer Systems, Inc.**, the school installed five HP Multiseat Computing Solutions to power-up 45 individual stations in their computer room. By connecting nine user stations to one PC, students get a personal computer setup complete with monitor, keyboard and mouse. This way, students are able to enjoy their own enriching and worry-free computing experience without the need of installing separate physical workstations for each user.

The HP Multiseat Computing Solution also delivers low power consumption as minimal as 2 watts per user, allowing La Purisima Concepcion Academy to save more on power costs and reduce their carbon footprint.

"The teachers are very much excited about the HP Multiseat Computing Solution. It's affordable, and at the same time it conserves more electricity and lets us save more on technology costs as compared to conventional computer systems," says Moreno.

Easy to install, scale and manage, the HP Multiseat Computing Solution also offers a simple plug and play setup, allowing the academy to deploy the new system in only a couple of minutes. The individual workstations are added via a USB connection so teachers simply plug in a workstation and easily install the applications the students need.
